

## Demo Reel Breakdown

Note: All models constructed in Maya

1, Clock Tower: The majority of the face plates are made of NURBS with the exception of the foremost three and the longest arms in the back. Everything else is polygons.

2, Chair with “sea horse” relief constructed of polygons, according to reference provided by project’s art director.

3, Walther P22 Handgun constructed of polygons using photographic reference of real life gun.

4, Female scientist character constructed of polygons, from personal design and human reference images.

5, Human head constructed of polygons, using human reference for geometry and textures which were created with Photoshop.

6, Wheel chair constructed of polygons to match real life chair of same design.

7, LED Bug, modeled in NURBS, from own personal design. Created as companion to female scientist (3)

8, Cat modeled in polygons, combination of photo reference and a personal touch of stylization.

9, Revolver, created in polygons using multiple reference images for inspiration to create final design, textures created using Photoshop and Flash.
